

# Wrestling with Storm Tides, Again: How to Host a Mock Storm Drill Kate Roosa, E.I.T. and Frank Cavaleri, Area Manager

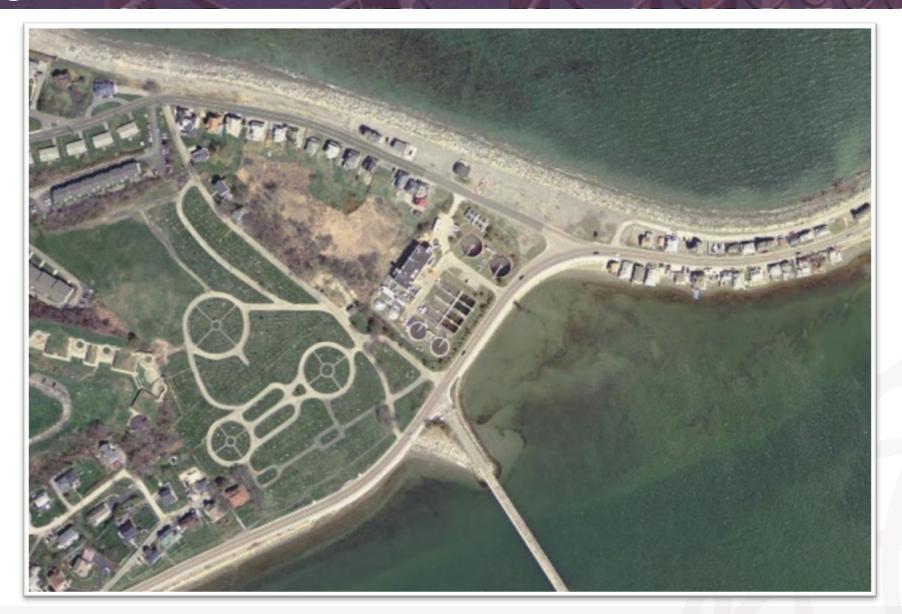

# Agenda

- Background and Introduction
- Storm Drill Components
- Lessons Learned
- Best Practices
- Tools and Resources

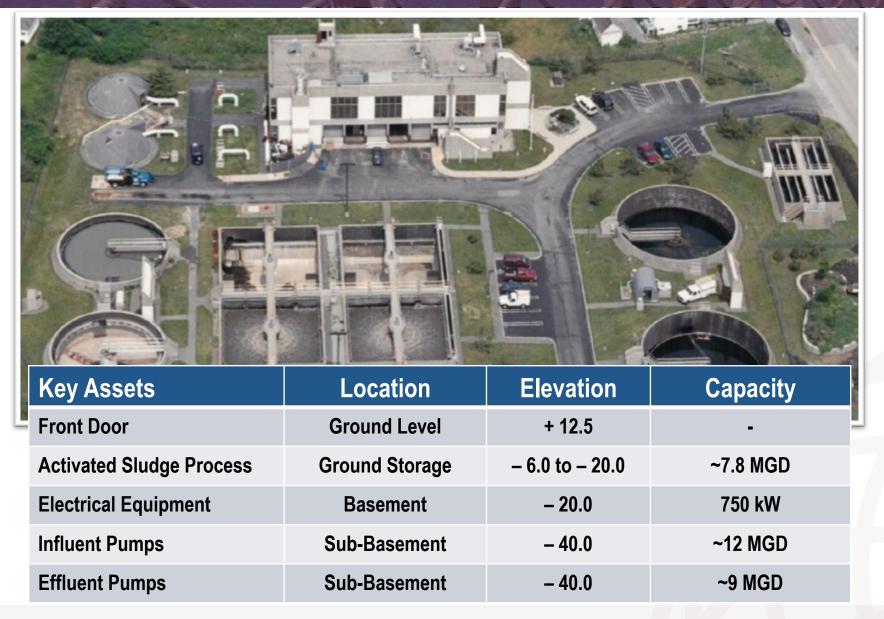

# **Background: Hull Wastewater Treatment Plant**

## **Background: Hull Wastewater Treatment Plant**

## Introduction: Storm Experience

Event	Date	Precipitation (inches)	Storm Tide (feet)
Blizzard of 1978	February 1978	24 + (Snow)	15.0'
No Name "Perfect" Storm	October 1991	3.61 (Rain)	14.2'
Winter Storm Nemo	February 2013	24+ (Snow)	13.9'

### Introduction

- Comprehensive Storm Event Planning
  - > Emergency Response Committee
- High Flow Management Plan
- Last major event was 2013

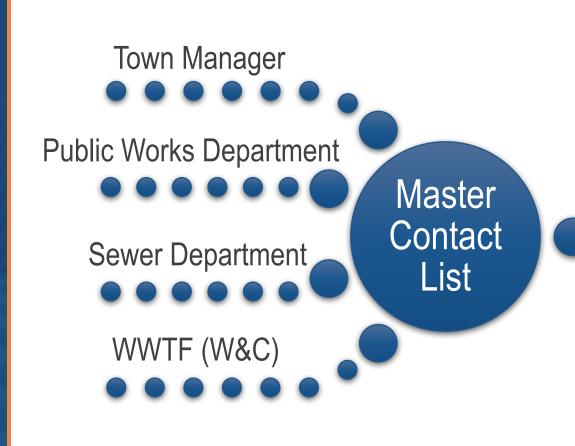

### **Storm Drill: Steps to Success**

- Bring Together KeyStakeholders
- Forecast the Worst Case Scenario
- All Plans are Drafts until they're Tested

# **Bring Together Key Stakeholders**

#### **Forecast Worst Possible Event**

- Level 1
  - Basic high flow event
    - @ 3.05 MGD sustained flow => switch to contact stabilization mode
- Level 2
  - Rainfall >3 inches per 24 hours and storm surge > 13 ft – Nor'easter
  - > Flows greater than plant peak design flow
- Level 3
  - > Catastrophic full or partial plant failure

#### **Put Plans to the Test!**

- Run Through Checklists
  - > Assigned in pairs/small groups
- Categorized by:
  - > Pre-Storm
  - > During Storm
  - > Storm Level

# Lessons Learned: Identifying Critical Field Elements

# Lessons Learned: Securing Facilities

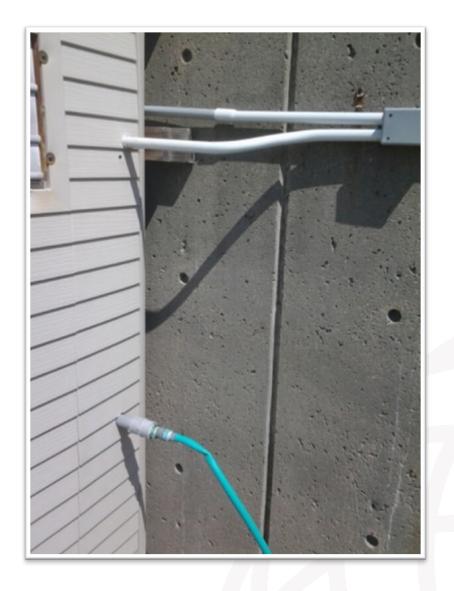

# Lessons Learned: Bulk Chemical Storage Security

## **Best Practice: Quick Checklists**

- Create quick, easy to follow checklists
- Take photos of process
- Maintain clean storage spaces
  - Time saved cleaning is time spent preparing!

#### Town of Hull Water Pollution Control Facility

#### Securing the Sodium Bisulfite Shed

Standard Operating Procedures	
Securing the Sodium Biguities	Original – Created 08/29/16
	Revision #:
Town of Hull Water Pollution Control Facility	Revision Date:
ondion Control Facility	Pages: 4

#### OBJECTIVE

 In the event of an anticipated Level (2) storm where flooding may be expected there needs to be standard operating procedures in place so that the Sodium Bisulfite Shed can be properly shut down and

#### Sequence of Events

Create a storage area in the garage where everything can fit and be safely stored during the storm

## **Best Practices: Easy to Follow Guides**

Frequent checking means relief of regular crew

- Go to bottom level of dry well & close normally open (NO) pump discharge valves.
- Open normally closed (NC) By-Pass valve to force main.
- Insure drain back valve is closed.
- Lower control floats below gravity sewer inlet.

#### By Pass Procedure using Portable Diesel Pump 4A or 4B

- 1) Lower suction hose into wet well & connect to portable pump.
- Connect discharge hose to pump and discharge to force main.
- Shut both pumps off. Even if power
- Go to second level of dry well & close normally open (NO) pump discharge valve to force main. See photo

for by pass pump

to force main

### Conclusions

- Advanced planning is key
- Get your team involved in the process
- Practice, practice, practice!
- Small changes can make big impacts in an emergency event

#### Tools & Resources

- **AWWA M19**
- NEIWPCC
- Massachusetts WARN
- CodeRED

- Aram Varjabedian, Bill Boornazian and WWTF Team
  - > Jim Gagliard and Jody St. George, Operations Experts
  - UConn Reclamation Plant Team
- Phil Leminos, Town of Hull Manager
- Jim Dow, Director of Public Works
- John Struzziery, Director of Wastewater Operations/Assistant Director of Public Works
