CITY OF QUINCY COASTAL INFRASTRUCTURE MITIGATION AND CLIMATE RESILIENCY STRATEGIES

**NEWEA Spring Meeting & Exhibit
June 5, 2019**

Paul Costello, PE – City Engineer
Marina Fernandes, PE – Project Manager
Gabrielle Belfit, CFM – Senior Environmental Scientist

PRESENTATION OVERVIEW

- **Present and Future Flooding Hazards**
- **A Resilient Quincy**
 - Planning for Climate Change
 - Prioritizing Strategies
 - Implementation
- **Winter Storm Riley Emergency Assessment and Response (stuff that happens while planning)**

CITY OF QUINCY

- 27 miles of coastline
- 25% of properties vulnerable to flooding
- 5th most repetitive loss claims in Massachusetts
- Municipal Vulnerability Preparedness Community

QUINCY'S TOP NATURAL HAZARDS

SEVERE WINTER WEATHER

COASTAL AND INLAND FLOODING

NOR' EASTER

CHANGING WEATHER

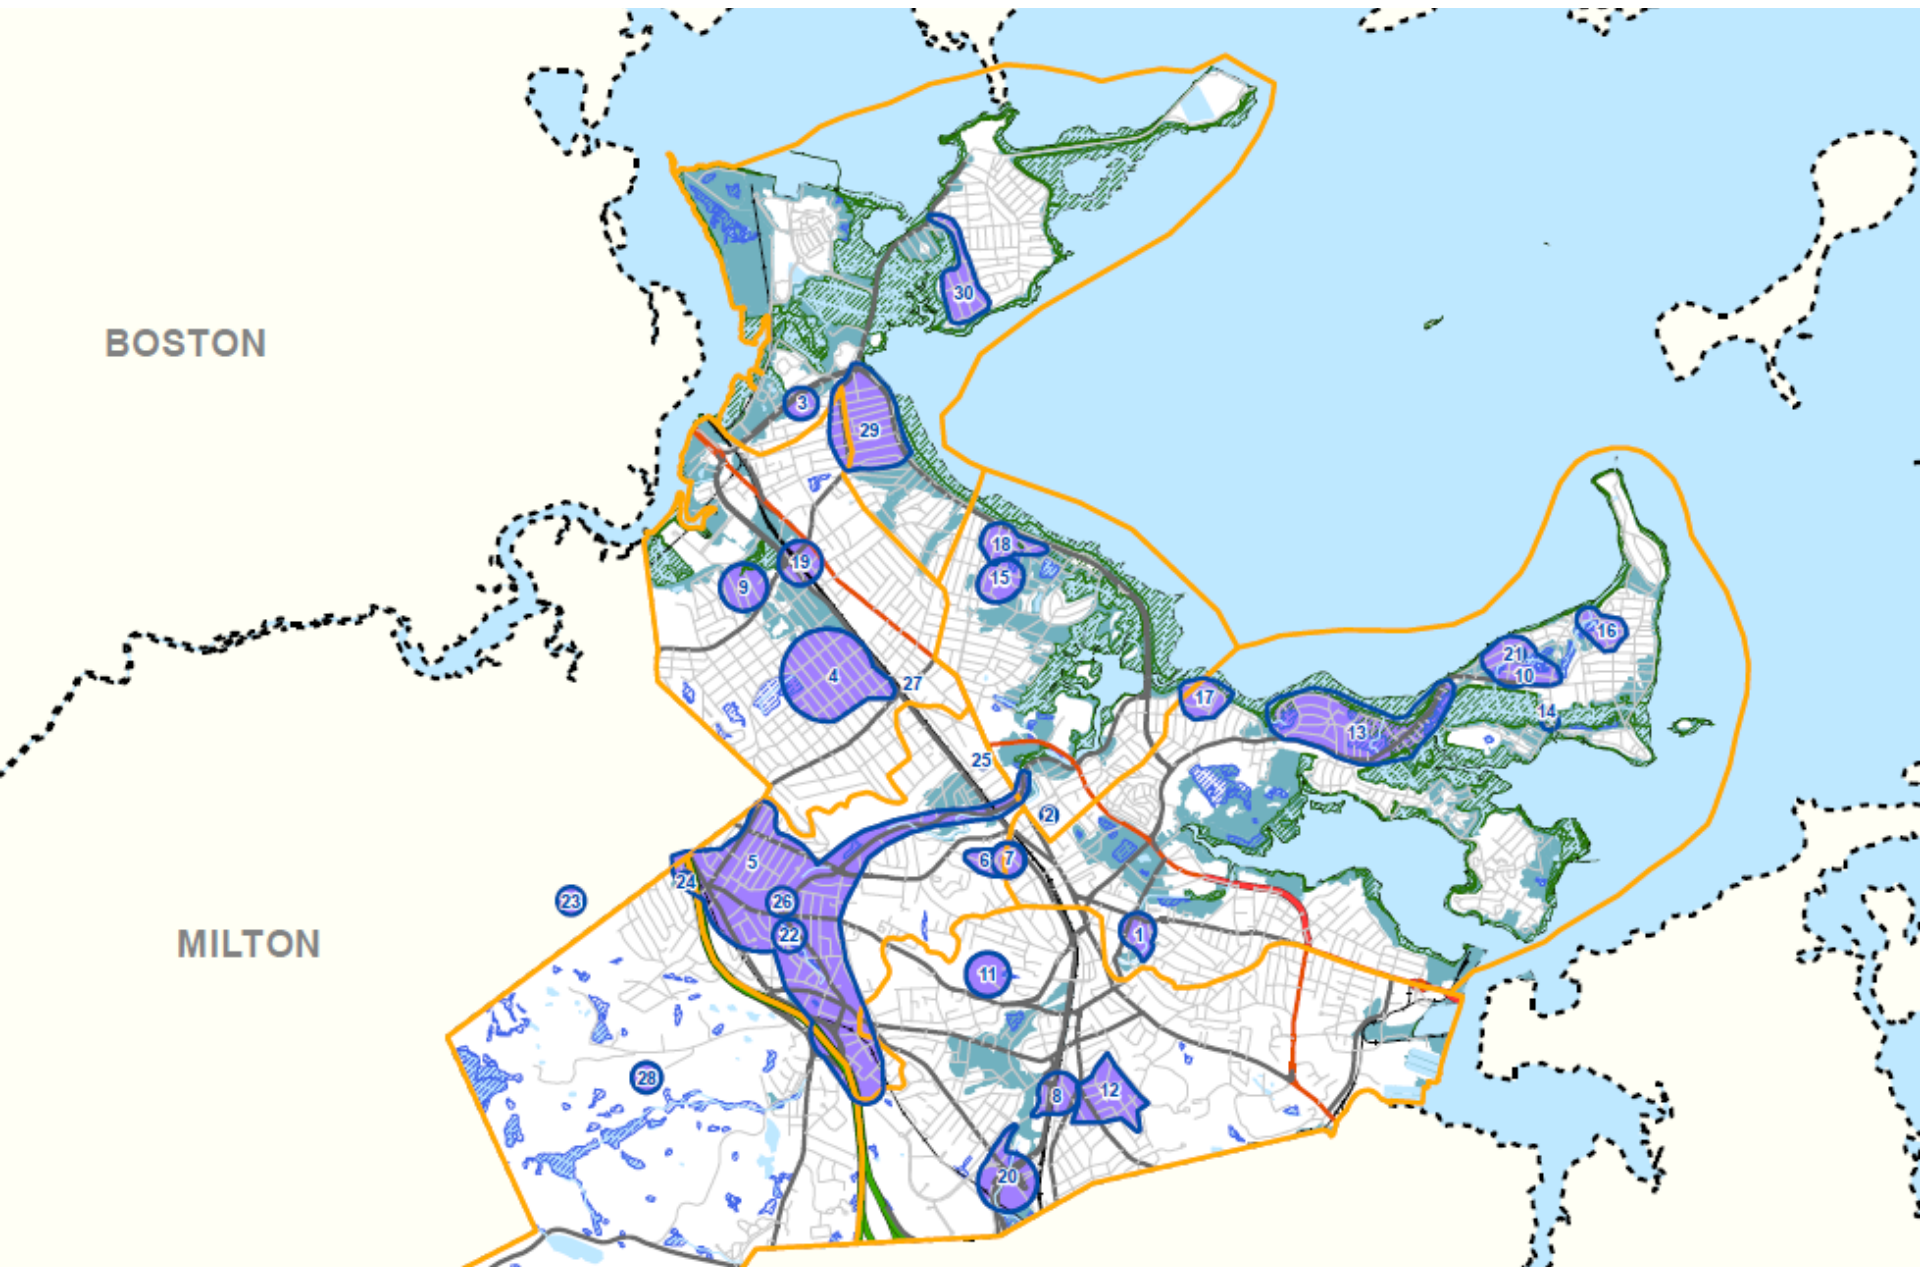

- Higher Temperatures
- Shorter Winters
- More frequent and intense storms
- Sea Level Rise
- Droughts

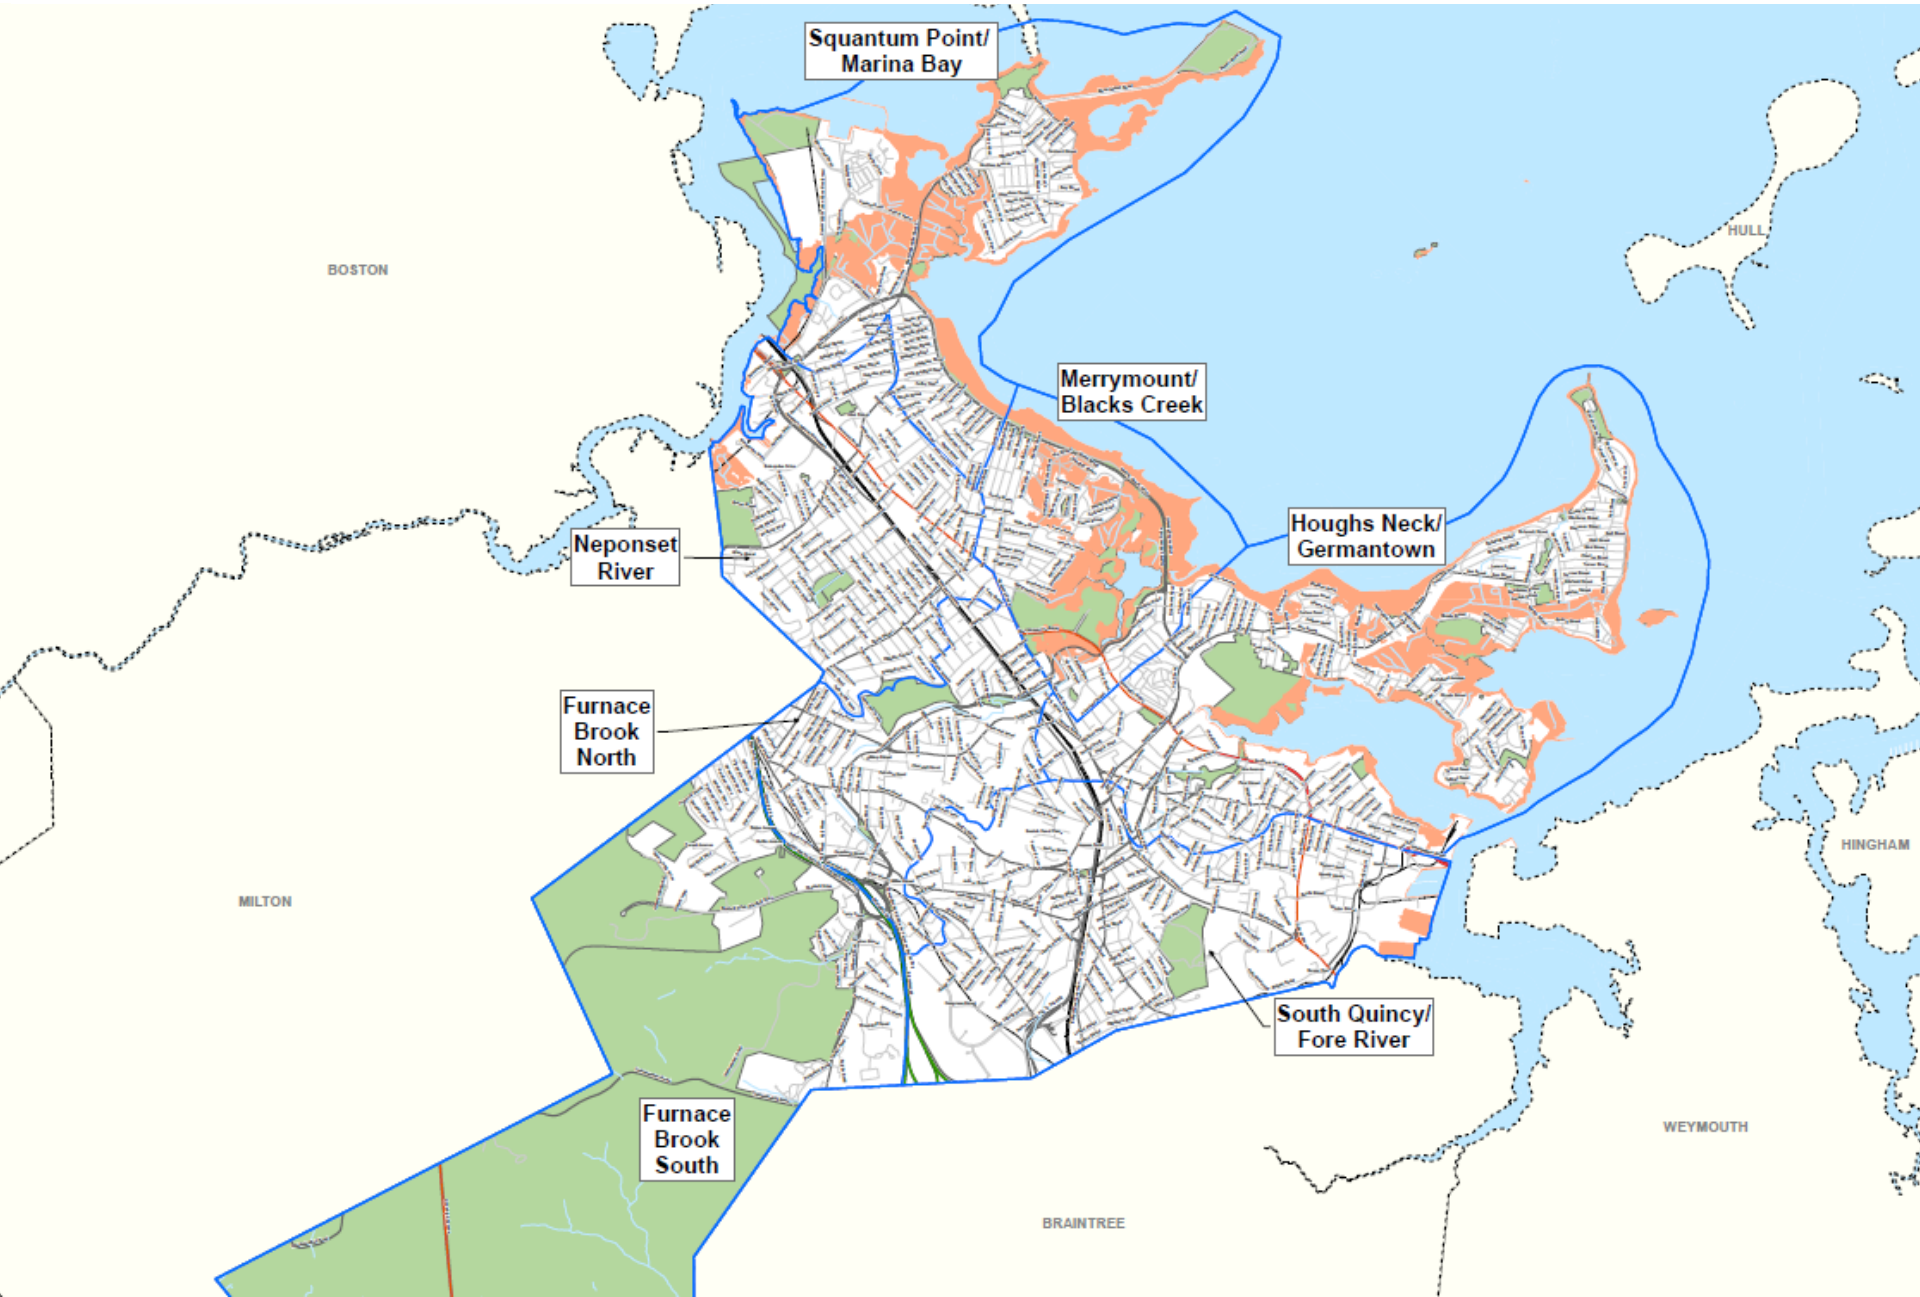

AMPLIFIED EXISTING RISKS

- Community and regional infrastructure
- Local and regional economies
- Public Health
- Natural resources and our environment

VULNERABLE AREAS... NOW

IN THE FUTURE SLR IS A CONCERN

STORM SEVERITY MAY INCREASE WITH CLIMATE CHANGE

National Academies of Sciences, Engineering, and Medicine. 2016.
Attribution of Extreme Weather Events in the Context of Climate Change.
Washington, DC: The National Academies Press. <https://doi.org/10.17226/21852>.

SEA LEVELS ARE RISING: THE TREND

Relative Sea Level Trend 8443970 Boston, Massachusetts

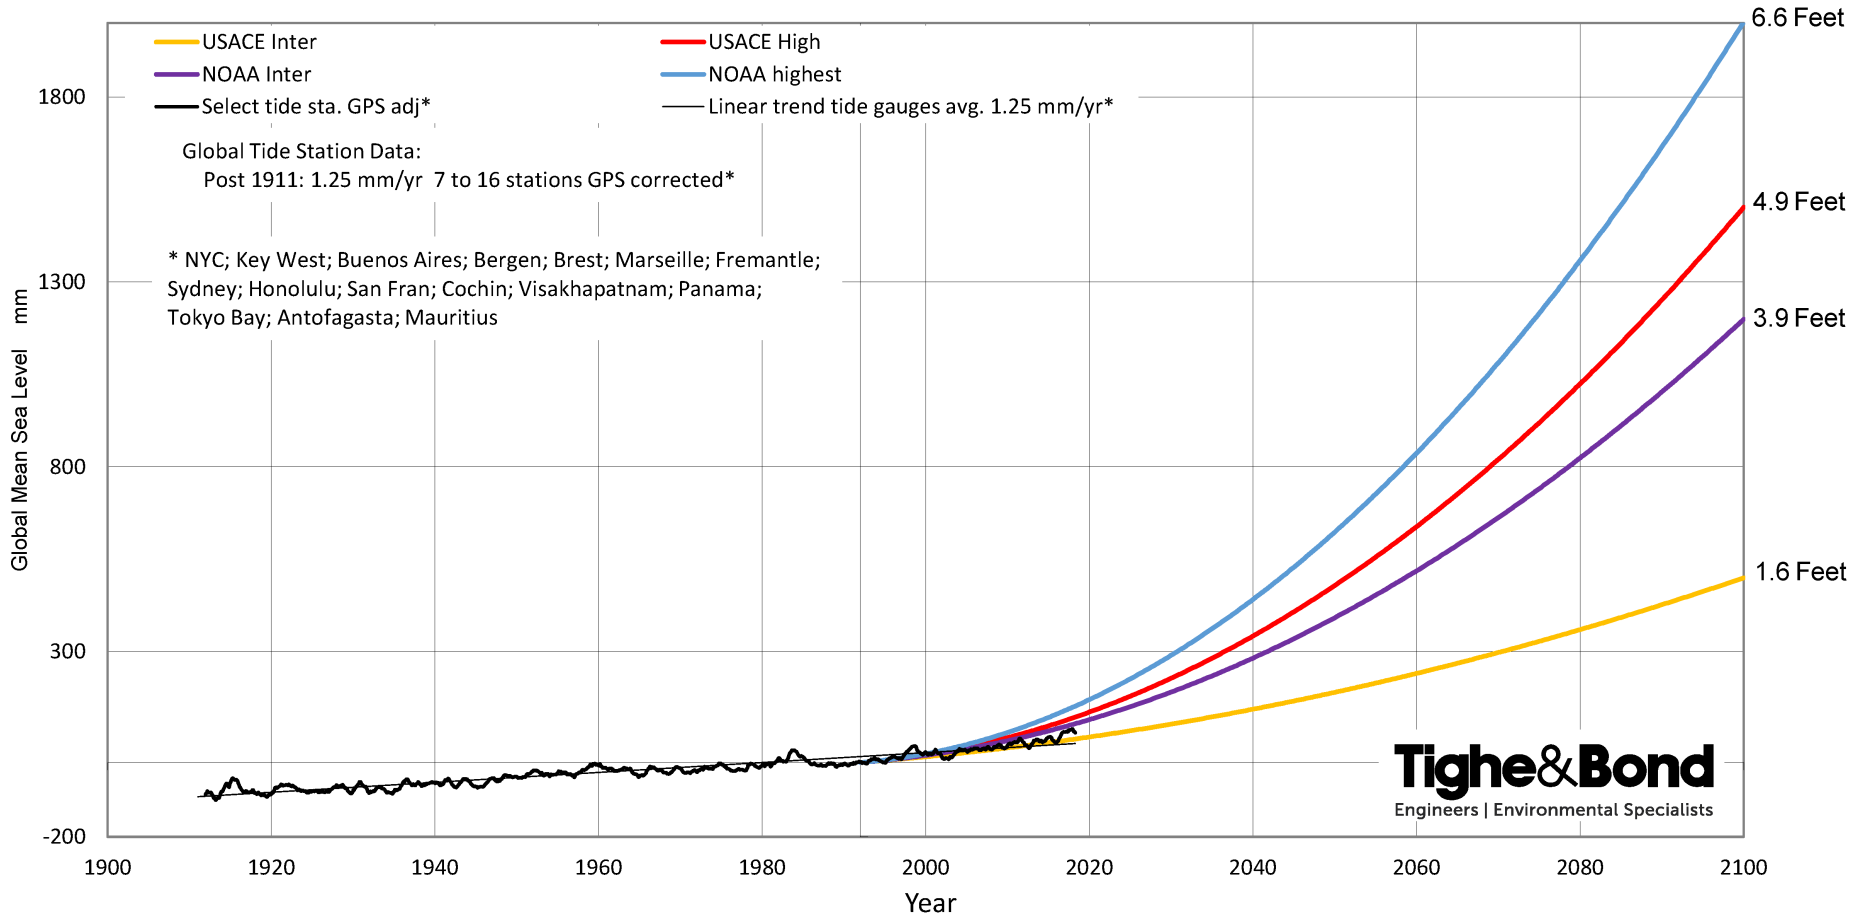

The relative sea level trend is 2.82 millimeters/year with a 95% confidence interval of +/- 0.16 mm/yr based on monthly mean sea level data from 1921 to 2017 which is equivalent to a change of 0.93 feet in 100 years.

Includes Boston tide gauge subsidence est. by NOAA at -0.84 mm/yr

SEA LEVEL IS EXPECTED TO RISE FASTER

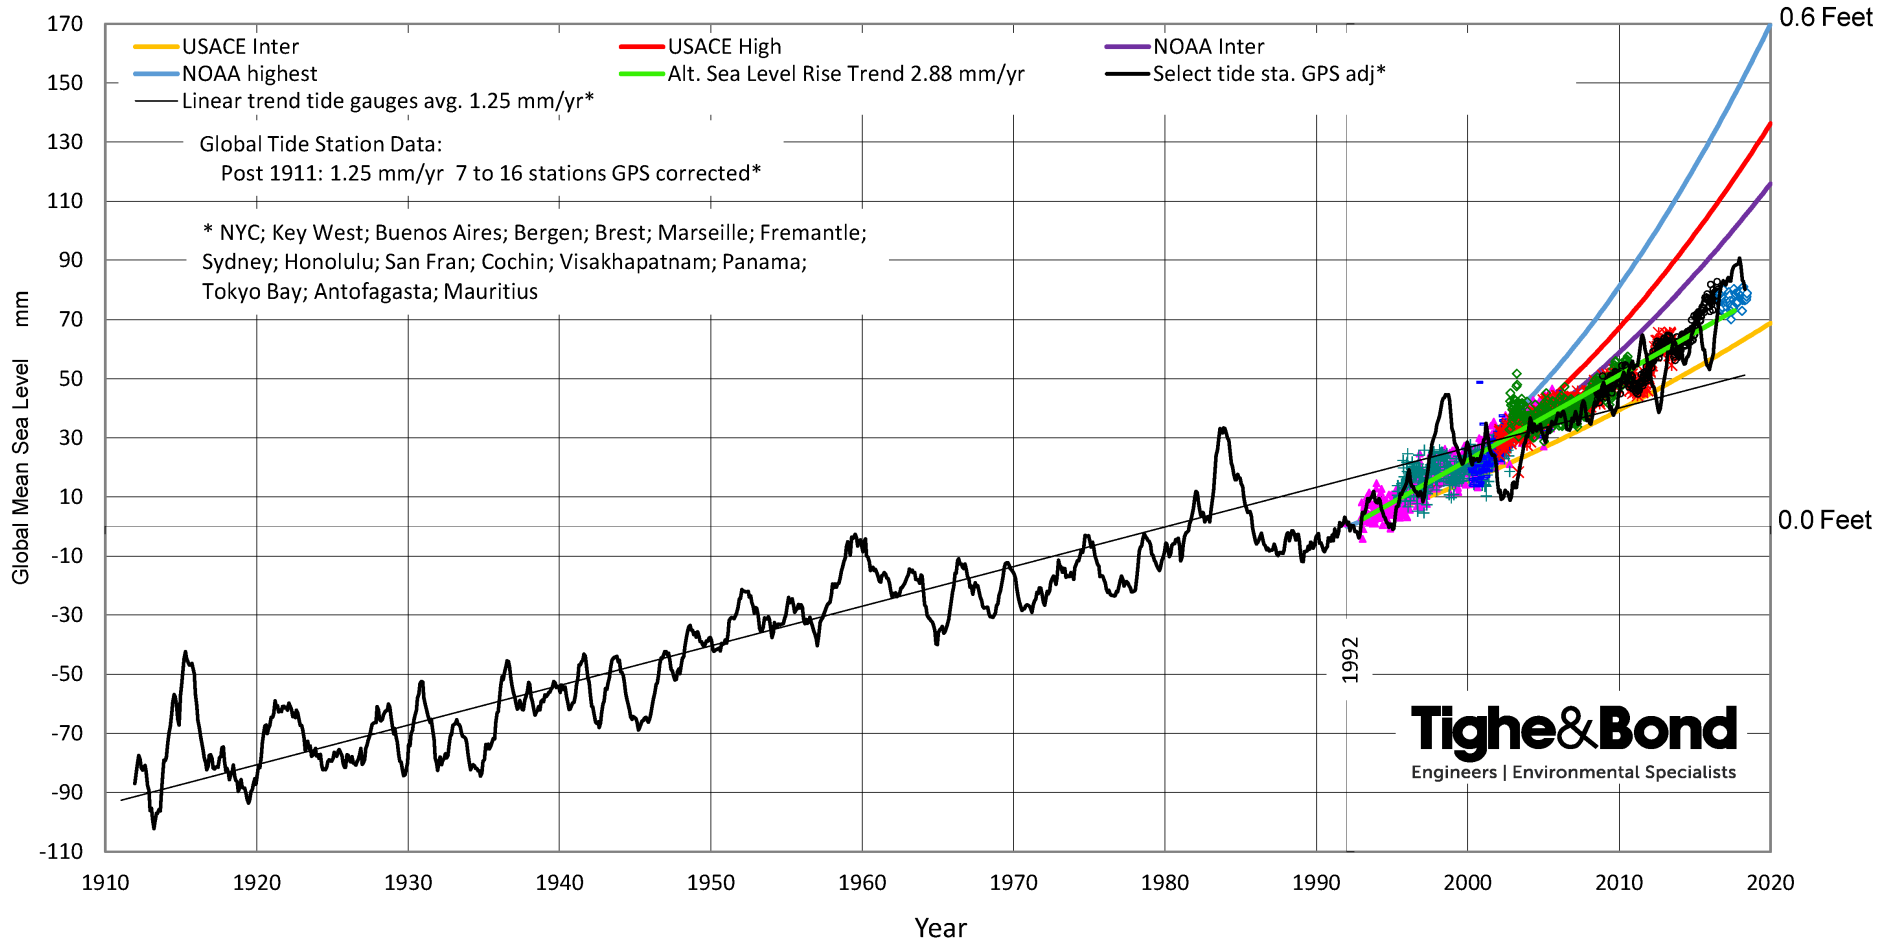

Sea Level Observations versus Projections

Projections: Global SLR Scenarios For the US National Climate Assessment, 2012

SEA LEVELS ARE RISING, BUT MINIMAL ACCELERATION SO FAR – REASONABLE FOR DESIGN

Sea Level Observations versus Projections

DESIGNING FOR CLIMATE CHANGE

- **Recommended approach for sea level rise estimates for projecting future coastal flooding risk in Quincy MA**

Time Period	Sea Level Rise	
	Projection ² (Feet)	Likely Range ³ (Feet)
Base (2000)	0	n/a
Near Term (2030)	0.6	0.5-0.8
Mid Term (2050)	1.1	0.8-1.4
Long Term (2070)	1.6	1.3-2.4

² 50% percentile, or median value

³ Range = 66% percent confidence limits (>17% and <83%)

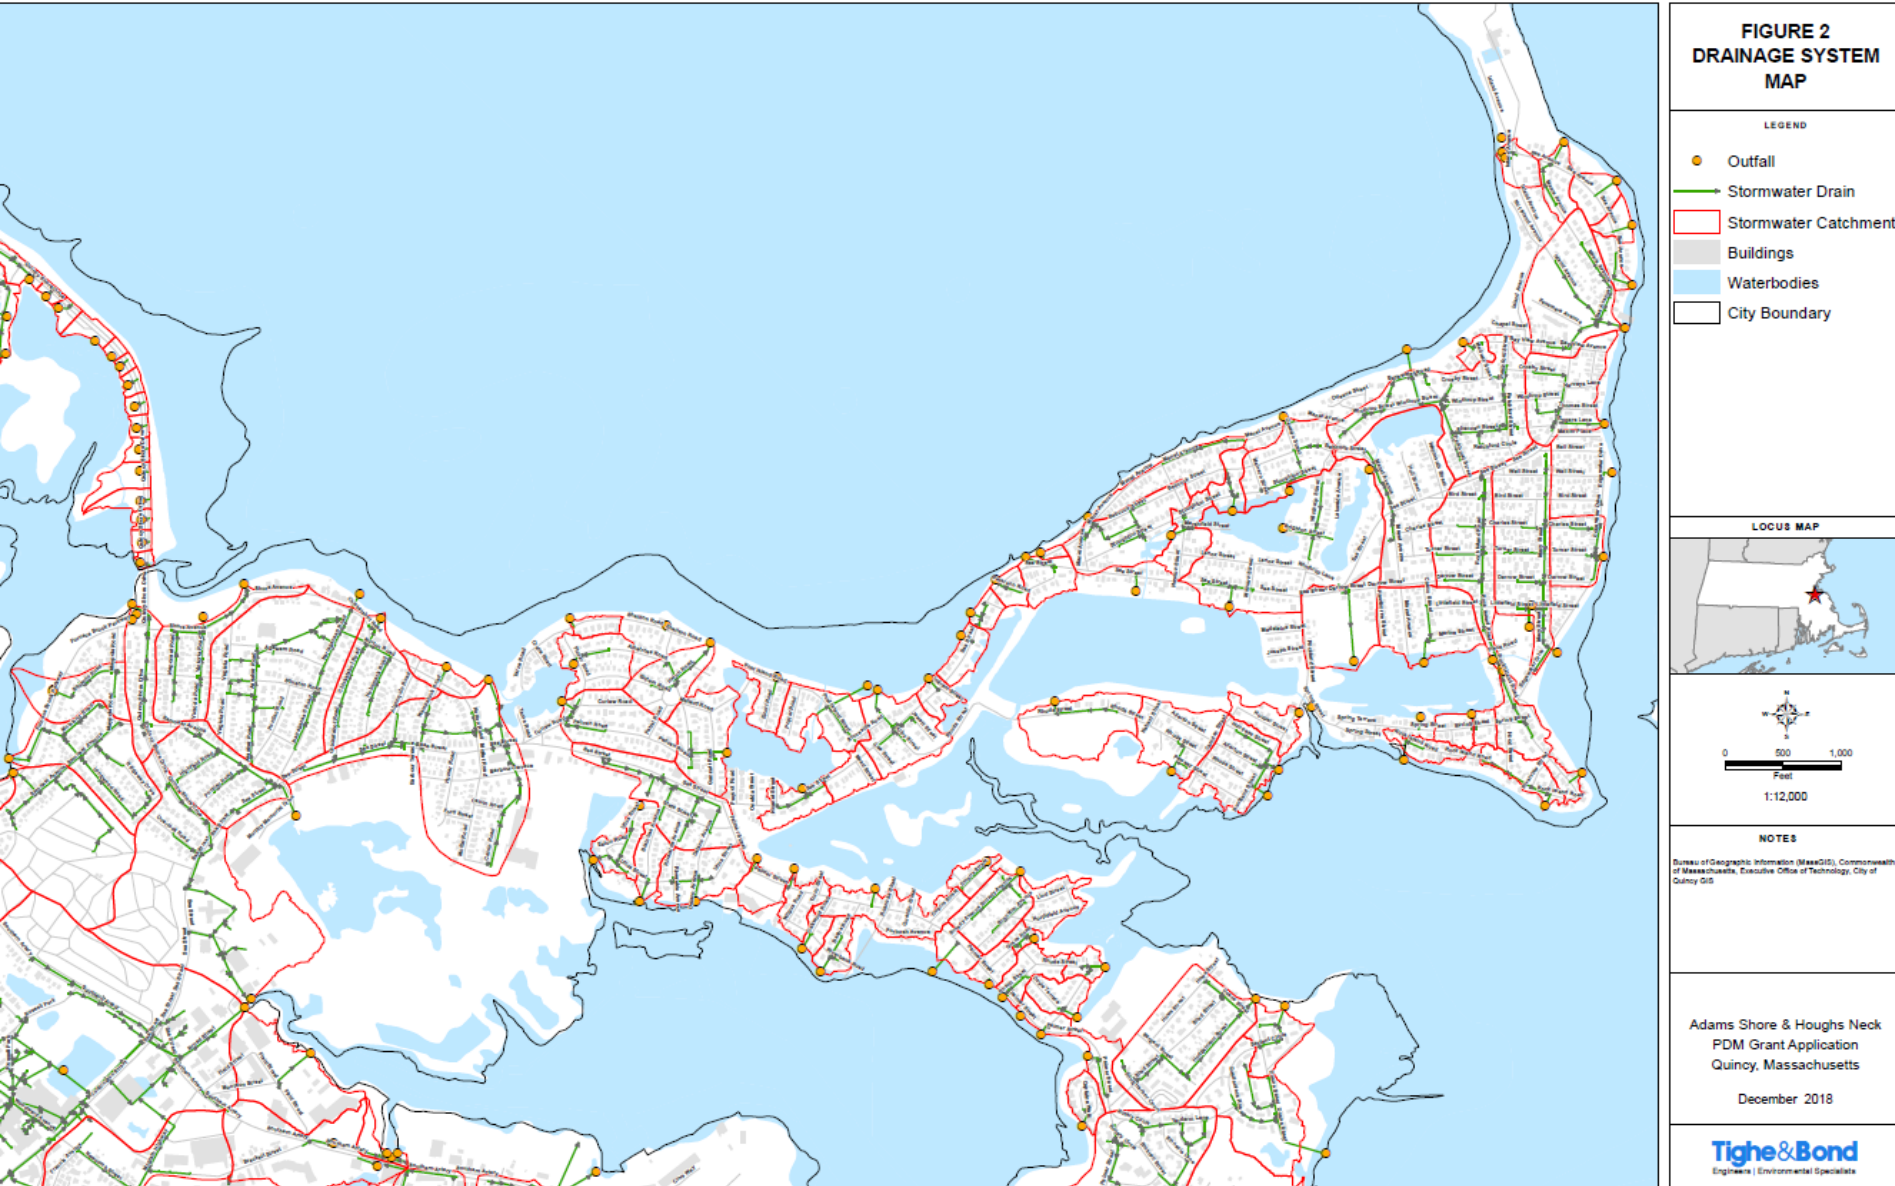

Seawall Assement

Houghs Neck Area Seawall Design

Houghs Neck Area Outfalls

THERE IS A PROBLEM AND A REGIONAL SOLUTION IS NEEDED

- There is a limit to what can be accomplished at the shoreline with down sides to making seawalls significantly higher, such as views and cost
- A regional surge barrier can be designed to offer huge benefits, such as flood damage reduction, reduced insurance costs, and property value preservation, while maintaining quality of life

Boston Hurricane Barrier Concept

April 2016

Tighe & Bond

PLANNING FOR FUTURE NATURAL HAZARDS WITH CLIMATE CHANGE

PLANNING FOR RESILIENCY

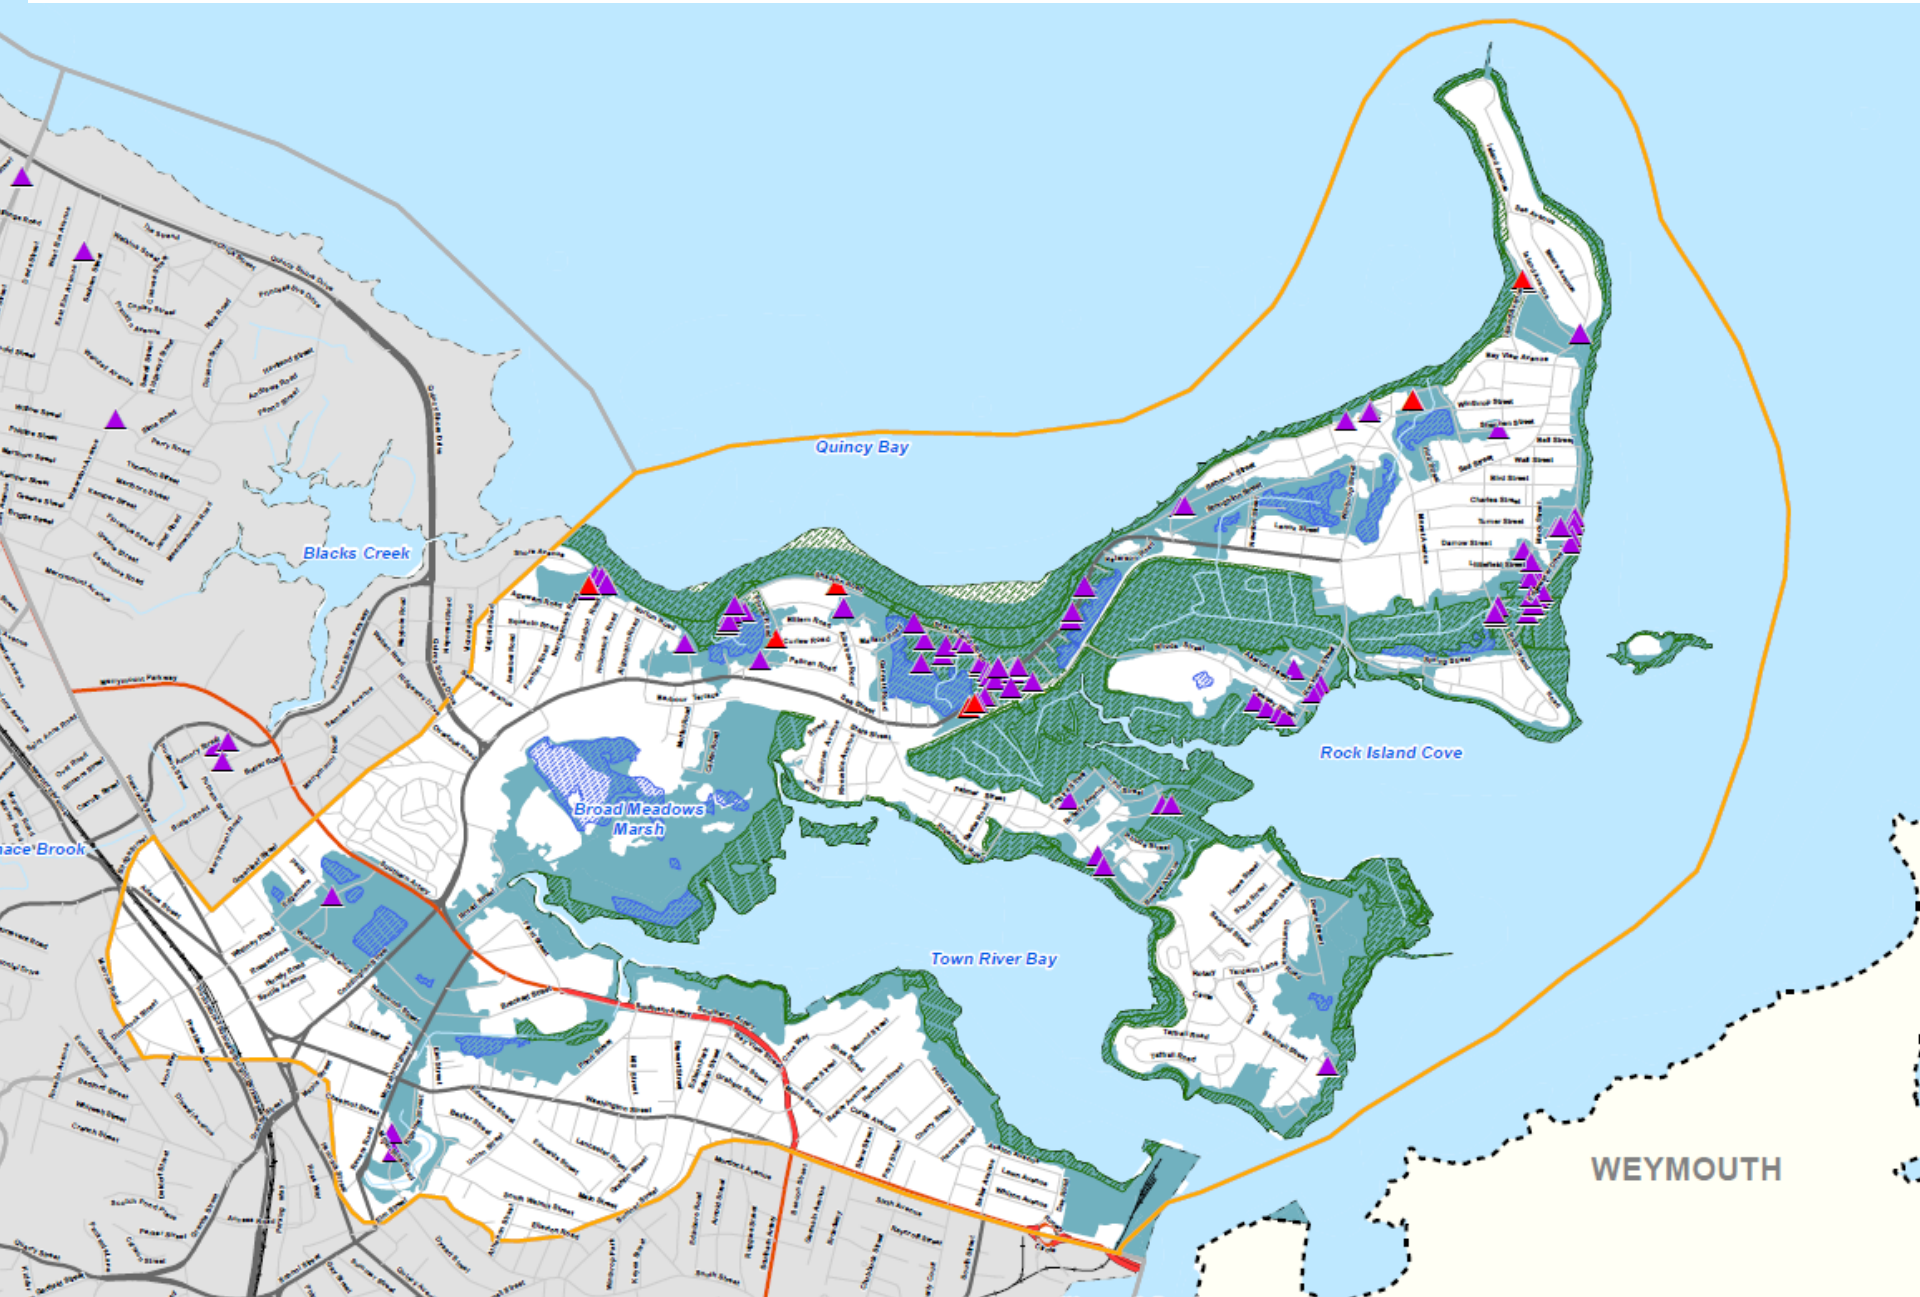

- City awarded a planning grant through Commonwealth's Executive Office of Energy and Environment
- Grant was to complete **Municipal Vulnerability Preparedness (MVP)** Community Resilience Building (CRB) Workshop Process
- This effort built on City's recently approved FEMA Hazard Mitigation Plan 5 Year Update (April 2019)

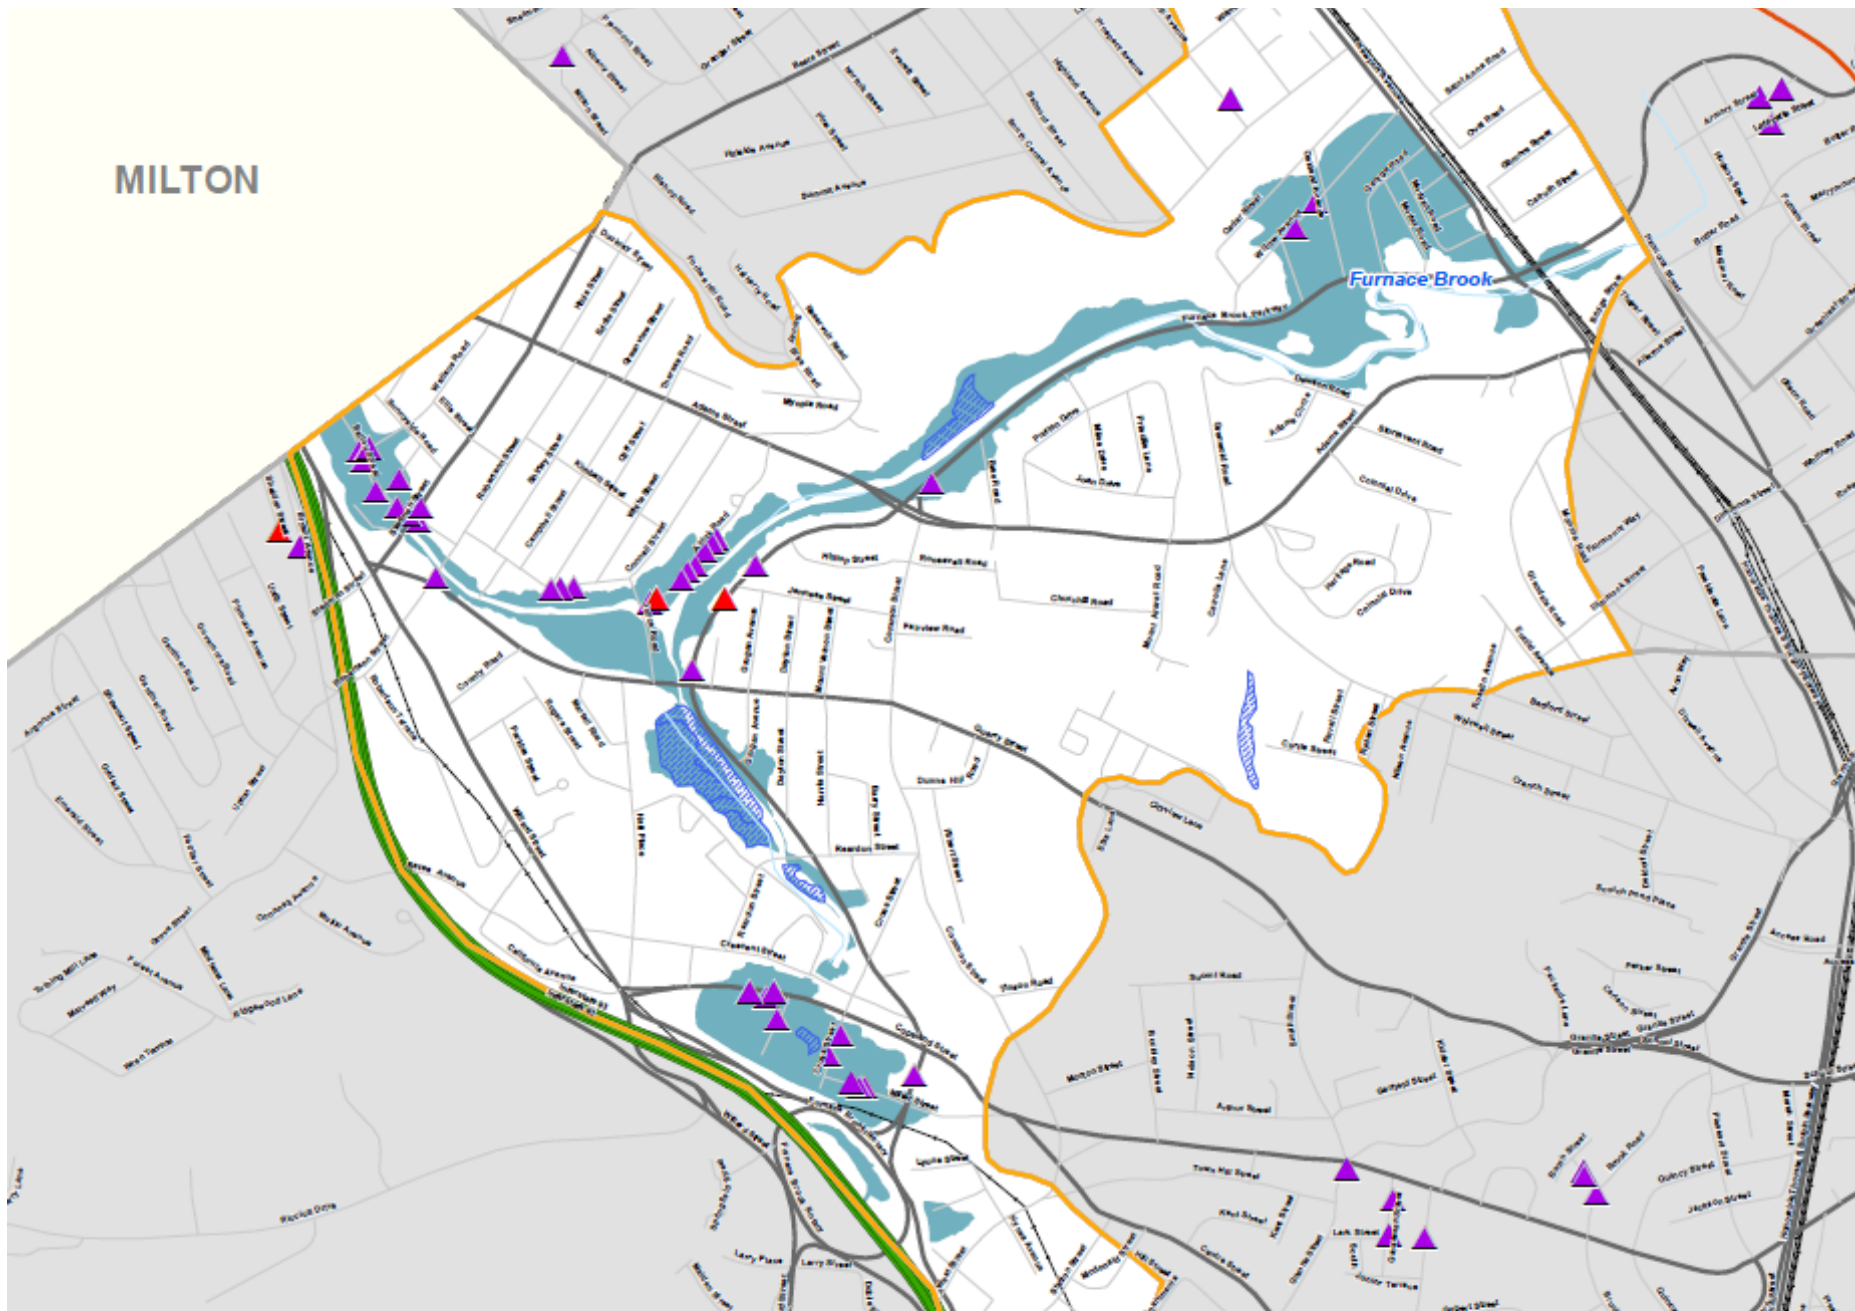

VULNERABILITY ASSESSMENT

RL HOUGHS NECK GERMANTOWN

RL FURNACE BROOK

RESILIENCY ACTIONS

TYPES OF RESILIENCY ACTIONS

1. Prevention
2. Property Protection
3. Public Education and Awareness
4. Natural Resource Protection and Green Infrastructure
5. Structural Projects
6. Emergency Services Protection

PRIORITY ACTIONS

High Priority	Moderate Priority	Lower Priority
<ul style="list-style-type: none">- Emergency Communications System- Emergency Power Generators- Stormwater Pumping Stations- Seawall Construction- Building Inspection Records System- Tide Gate Construction and Management Plan- Public Education and Post Disaster Support	<ul style="list-style-type: none">- Drainage Improvements- Tree Removal Equipment- Slope Protection and Infrastructure Hardening- Sewer System Modernizations- Sewer System Interceptor Relief- Hurricane Barrier Evaluation	<ul style="list-style-type: none">- Coastal Buffer Maintenance- Salt Marsh Restoration- Seismic Impact Evaluation and Gas Utility Study- O'Rourke Field Conversion

2018 STORM RILEY

Firefighters rescue a mother and child by boat after their residence was flooded along Post Island Road in the Houghs Neck section of Quincy, Mass., Friday, March 2, 2018. (John Thumack/The

RECENT STORM SURGES (NEAR 1% EVENTS)

Grayson Jan. 4, 2018

NOAA/NOS/CO-OPS
Observed Water Levels at 8443970, Boston MA
From 2018/01/04 00:00 LST/LDT to 2018/01/04 23:59 LST/LDT

Riley Mar. 2, 2018

NOAA/NOS/CO-OPS
Observed Water Levels at 8443970, Boston MA
From 2018/03/02 00:00 LST/LDT to 2018/03/03 23:59 LST/LDT

— Predictions — Verified — Preliminary — (Observed - Predicted)

POST STORM EMERGENCY ASSESSMENT – MOBILIZATION

- **March 3rd – 5th**

STORM DAMAGE SITE INSPECTIONS

Region:
Adam's Shore - Terne Road/Shelton

Date: 3/5/2018 1:20:42 PM

Location ID: 128

Observation:
Significant spalling on 7 units along landside of seawall
