

CONFERENCE ANNOUNCEMENT & CALL FOR ABSTRACTS

THE NORTHEAST RESIDUALS & BIOSOLIDS CONFERENCE

Fall 2021

The joint NEWEA/NEBRA conference and exhibit is a great forum to learn the latest trends in the management of biosolids and residuals, and it is a “must” for all those involved in the challenge of managing these materials in the Northeast. As part of our ongoing effort to manage the COVID-19 pandemic, we have decided to make this year’s conference a hybrid event with a series of on-line webinars packed with the same high-quality content and networking you would expect from the live conference, as well as a tradition option for in-person sessions and networking.

Abstracts are currently being accepted in the following five topics:

- COVID-19 Residuals Management Impacts
- PFAS Research and Impacts to Residuals programs
- Residuals Master Planning and Co-digestion
- Odor and Impacts on End Use
- Emerging trends and technologies for sludge handling and management

Please Submit Abstracts [Online](#) by Friday, July 16, 2021.

Join us this Fall for networking opportunities, the latest residuals management trends, and even a couple of fun events! Contact training hours will be awarded for operator and engineering re-certification in participating states, as approved.

Sponsored by: NEWEA’s Residuals Management Committee & North East Biosolids and Residuals Association (NEBRA).
