

# Making Dollars and the second second for the second **Growing Risk**

Showcasing a New Digital Tool to Understand Flood Risk, Obtain Funding, and Build Resilience

**NEWEA Annual Conference** January 25, 2023

## Agenda

#### 1 Background

Risk Quantification, the Flood Risk Calculator, and Benefit-Cost Analysis

#### 2 Case Study 1

Nantucket Coastal Resilience Plan

#### 3 Case Study 2

Coastal Resilience Solutions for East Boston and Charlestown (Phase II) 4 Case Study 3

Use in Federal Funding Applications

#### Case Study 4

5

Incorporating Social Equity

#### 6 Conclusion/Q&A

... But why?

## **Background:** Flood Risk Calculator

- 40+ years of experience in risk estimation on our team
- Customized spreadsheet model built to replicate Hazus, BCA Toolkit, and integrate additional methodologies
- Flood Risk Calculator built to standardize and automate spreadsheet model

## **Flood Risk Calculator**

An Arcadis Product

## Background: Benefit Cost Analyses

### Components <u>Benefits</u> • Losses avoided • Value added • Social

- Environmental
- Economic
- Policies that reduce risk

#### <u>Costs</u>

 Estimates for flood resilience investments  Baseline risk and vulnerability assessments

Uses

- Loss avoidance assessments
- Alternatives evaluation
- Consensus building for project implementation
- Justification of public or private expenditure
- Funding applications
- Life cycle analyses

#### **RECOMMENDED TIMELINE**

\* Upper limit includes additional park space Both costs and phasing plans are estimates and \*\* Costs for Option A only costs and phasing plans are estimates and recommendations only, and will require more detailed \*\* Costs for Option A only. Does not include costs to floodproof the Fish Piers \*\* Cost range includes Options A and B. Floodproofing of Piers not included. No Dry Dock 4 costs included \*\* Floodproofing all structures seaucard of Option B would and shi3 - \$131 million. Costs not included

#### **Case Studies**

Nantucket: Informing risk-based planning at community scale

**Boston**: Detailed Benefit-Cost Analysis for neighborhood-level flood mitigation design and implementation planning

Funding: Use in grant application development for federal funding

Equity: Incorporating social equity weights

## Nantucket Coastal **Resilience Plan**

An island-wide adaptation plan that used risk quantification to drive decisions about how and where to adapt to erosion and flooding

Source: Town of Nantucket

#### **Nantucket Coastal Resilience Plan**

#### **Coastal Resilience Solutions for East Boston** and Charlestown (Phase II)

#### COASTAL RESILIENCE SOLUTIONS FOR EAST BOSTON AND CHARLESTOWN (PHASE II)

#### **FINAL REPORT**

August 2022

#### CITY of BOSTON

Source: City of Boston

Coastal modeling performed by Woods Hole Group to inform project sequencing and distribute loss avoidance under different adaptation scenarios

# **Coastal Resilience Solutions for East Boston and Charlestown (Phase II)**

Losses Avoided - Charlestown

## Urban Water Department Stormwater Flood Mitigation Project

Standard output from FRC (below) is directly entered into FEMA BCA Toolkit (right)

## **Social Equity Weighting**

#### Advanced Review

Accounting for risk aversion, income distribution and social welfare in cost-benefit analysis for flood risk management

Jarl Kind,<sup>1\*</sup> W.J. Wouter Botzen<sup>2,3</sup> and Jeroen C.J.H. Aerts<sup>2</sup>

Published: 2017

# $Equity Weight(EW) = \left(\frac{Block Group Median Income (\$)}{Regional Median Income (\$)}\right)^{-\gamma}$

TABLE 5         Flood Risk According to Four Different Metrics				Expected Damage		Risk Premium Adjusted			Equity Weight Adjusted		Social Welfare Adjusted			
						Expected Annual	Social	Certainty Equivalent Annual Damage (CEAD)			Equity Weighted Expected Annual Damage (EWEAD)		Equity Weighted Certainty Equivalent Annual Damage (EWCEAD)

#### **Application in Risk-Based Flood Resilience Strategy**

Social Equity Weighted Direct Physical Damage

## .... But why?

- Risk quantification helps inform decision-making
- Improved internal workflows allows us to do MORE for climate adaptation
- Need to increase digital capacity in our industry
