

Making Sense of Social Vulnerability Indices and Tools

NEWEA Annual Conference

January 22, 2024

Presented by Nicholas Mitch, AICP

Overview

1

What is social vulnerability?

2

Why does social vulnerability matter?

3

How do we measure vulnerability?

4

Is there a best tool?

What is social vulnerability?

A few definitions:

“Social vulnerability refers to the potential negative effects on communities caused by external stresses on human health.”

“The degree to which a system (social or ecological) is susceptible to or unable to cope with or adapt to effects of climate change and associated hazards”

FEMA

“Social vulnerability is the susceptibility of social groups to the adverse impacts of natural hazards, including disproportionate death, injury, loss, or disruption of livelihood.”

“Social vulnerability is defined as the disproportionate susceptibility of some social groups to the impacts of hazards, including death, injury, loss, or disruption of livelihood.”

To summarize:

- **We are all subject to environmental risk**
 - Varies depending on physical location
 - Could be short-term or long-term
- Some groups of people are marginalized as a result of **historical and ongoing social and economic forces**
 - This includes direct prejudice and discrimination as well as a variety of policies and regulations with resulting intentional and unintentional consequences
- Otherwise **marginalized people are more vulnerable to harm when faced with environmental challenges**
 - First, when exposed
 - Second, when recovering
- This has been **well established** through robust scholarship.

Why does social vulnerability matter to our work?

Considering social vulnerability in planning and service delivery allows us to better serve our communities

State, federal, and grant funding increasingly requires social vulnerability to be considered.

Even when not required, consideration can increase application competitiveness.

**How do we measure social
vulnerability?**

Create an index

Composite statistic that allows us to simultaneously consider multiple variables

Variables are tied to geographies

Allows for meaningful comparison between geographies.

Federal Social Vulnerability Indices and Tools*

Social Vulnerability Index (SVI) – Centers for Disease Control and Prevention

Environmental Justice Screening and Mapping Tool (EJ Screen) – Environmental Protection Agency

Energy Justice Mapping Tool / Disadvantaged Communities Reporter – Department of Energy

National Risk Index (NRI) / Resilience Analysis and Planning Tool (RAPT) – Federal Emergency Management Agency

US DOT Equitable Transportation Community (ETC) Explorer – Department of Transportation

Climate and Economic Justice Screening Tool (CEJST) – White House Council on Environmental Quality

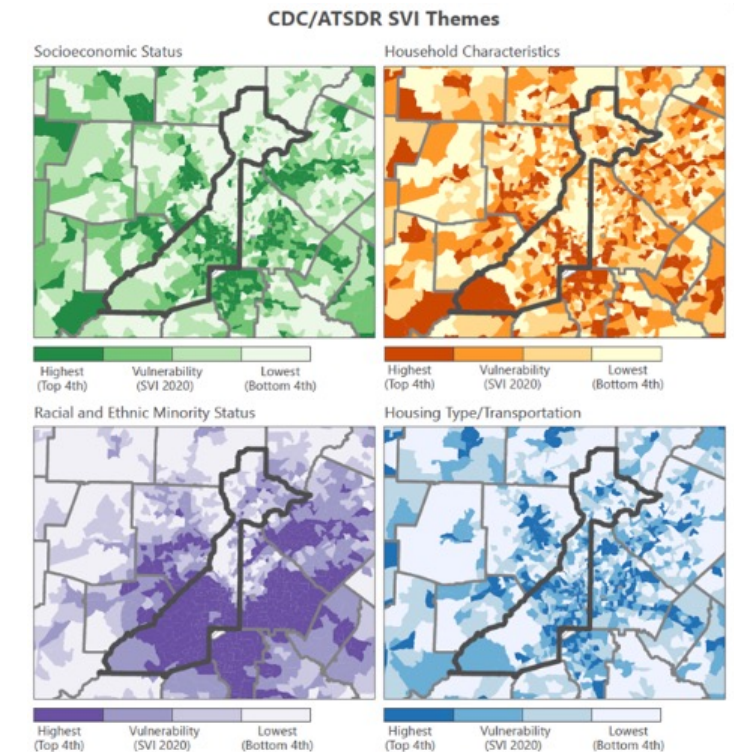

Social Vulnerability Index (SVI) – Centers for Disease Control and Prevention

Purpose: Help public health officials and emergency response planners identify communities that will most likely need support before, during, and after a hazardous event.

Number of Variables: 16, across 4 categories (“themes”)

- Socioeconomic (5)
- Household (5)
- Racial and Ethnic Minority Status (1)
- Housing Type and Transportation (5)

Data Source: US Census Bureau

Maps show the range of vulnerability in Fulton County, Georgia for the four themes

Energy Justice Mapping Tool / Disadvantaged Communities Reporter – Department of Energy

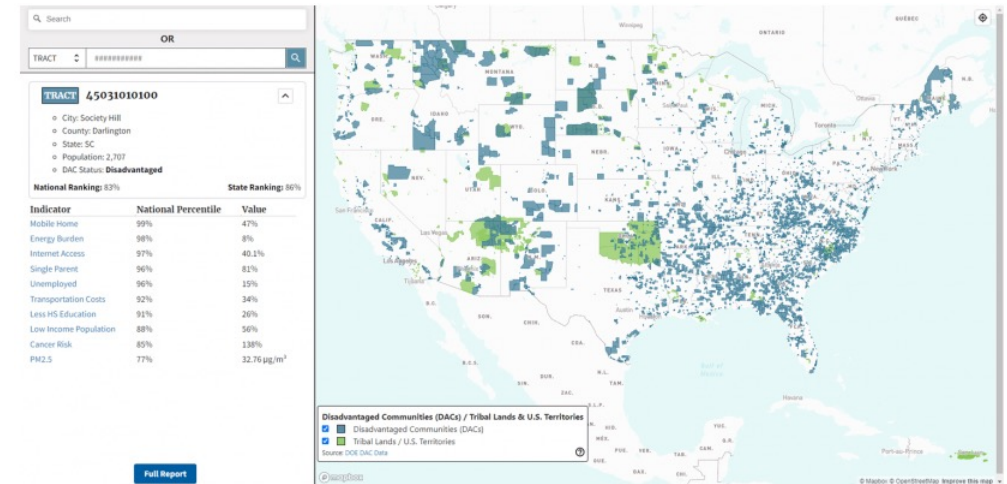

Purpose: Help the Department of Energy and related practitioners to implement federal Justice40 efforts.

Number of Variables: 36, across 4 categories

- Fossil Dependence (2)
- Energy Burden (5)
- Environmental and Climate Hazards (10)
- Socio-economic Vulnerabilities (19)

Data Sources:

- US Census Bureau
- Center for Neighborhood Technology
- FEMA National Risk Index
- US Department of Commerce National Telecommunications and Information Administration
- US EPA EJ Screen
- US Department of Energy Low-Income Energy Affordability Data (LEAD)
- US Department of Agriculture (USDA) ERS - Food Access Research Atlas
- US Department of Housing and Urban Development (HUD)

US DOT Equitable Transportation Community (ETC) Explorer– Department of Transportation

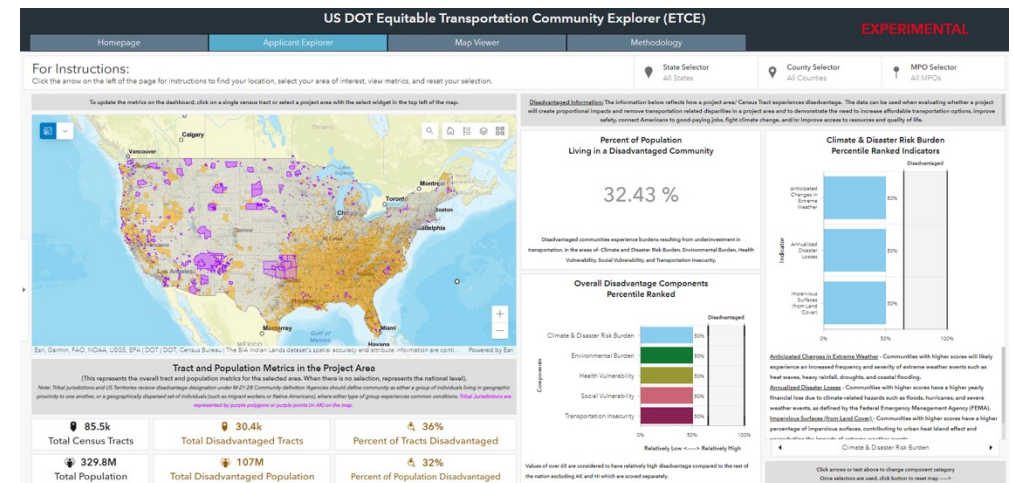

Purpose: Assist applicants for funding (and other leaders) to identify whether a project is located in a disadvantaged area.

Number of Variables: 40, across 5 categories

- Transportation Insecurity (3)
- Climate and Disaster Risk Burden (3)
- Environmental Burden (16)
- Health Vulnerability (5)
- Social Vulnerability (13)

Data Sources:

- US Census Bureau
- Bureau of Labor Statistics (BLS)
- Bureau of Transportation Statistics (BTS)
- CDC Places
- FEMA NRI
- FEMA Resilience Analysis and Planning Tool (GINI Index)
- US Department of Transportation (DOT)
- US EPA EJ Screen
- US Geological Survey (USGS) MRLC NLCD Land Cover
- NOAA
- US Department of Housing and Urban Development (HUD)

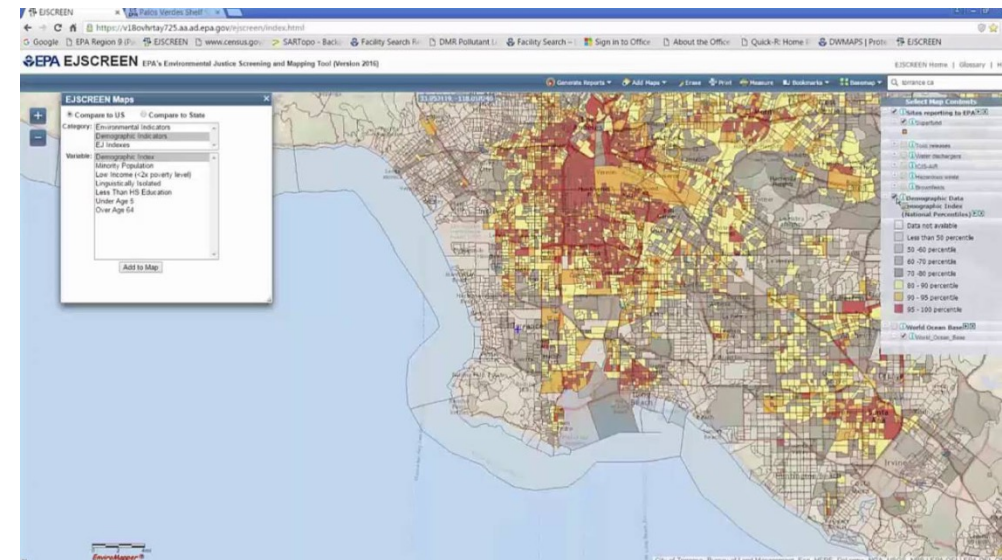

Environmental Justice Screening and Mapping Tool (EJ Screen) – Environmental Protection Agency

Purpose: provides EPA with a nationally consistent dataset and approach for combining environmental and demographic socioeconomic indicators.

Number of Variables: 19, across 2 categories

- Environmental / EJ indicators (12)
- Socioeconomic indicators (7)

Data Sources: US Census Bureau, US Environmental Protection Agency

National Risk Index (NRI) / Resilience Analysis and Planning Tool (RAPT) – Federal Emergency Management Agency

Purpose: Illustrate communities most at risk to a variety of natural hazards. **Establish a baseline risk measurement** for each United States county and Census tract including a Community Resilience Score.

Number of Variables: 100 in the context of 18 natural hazards

Data Sources:

US Census Bureau
 Bureau of Labor Statistics (BLS)
 Bureau of Transportation Statistics (BTS)
 CDC SVI
 Energy Information Administration
 Federal Communications Commission (FCC) Internet Access
 FEMA NRI
 FEMA Resilience Analysis and Planning Tool (GINI Index)
 HVRI Baseline Resilience Indicators for Communities
 NOAA

National Weather Service
 NEXRAD Real-Time Weather Radar
 US DOT
 US Army Corps of Engineers (USACE)
 USDA Census of Agriculture
 US Department of Education (DOEd) NCES
 US EPA EJ Screen
 US Forest Service Water Supply Stress Index
 US HUD
 USGS MRLC NLCD Land Cover
 USC SHELDUS

Climate and Economic Justice Screening Tool (CEJST) – White House Council on Environmental Quality

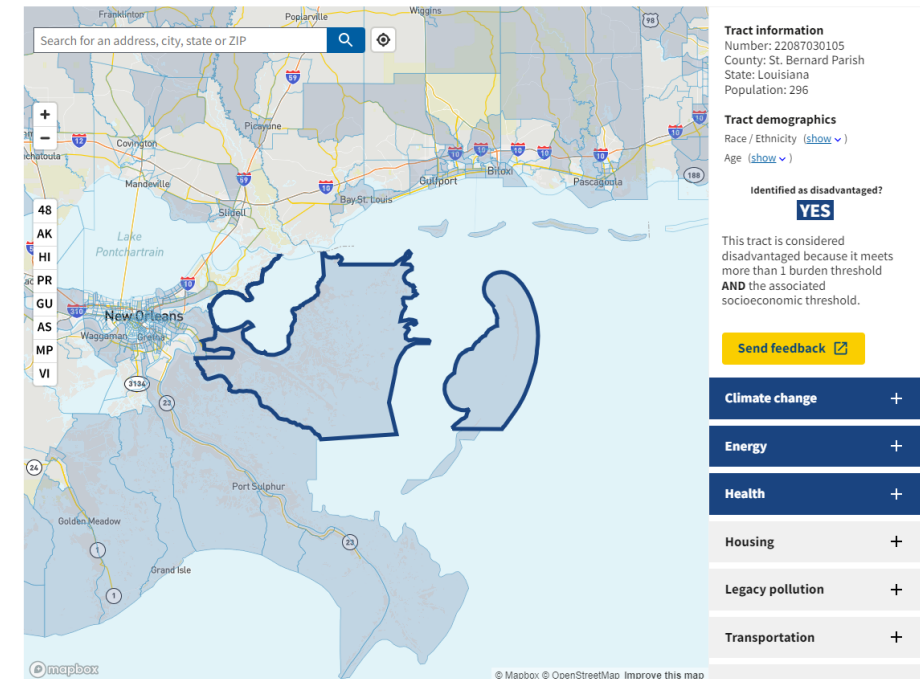

Purpose: Identifies communities that have faced historic injustices and have borne the brunt of pollution with the intent of ensuring these communities are the first to see the benefits of climate action.

Consolidates data and variables from other sources, across 8 categories.

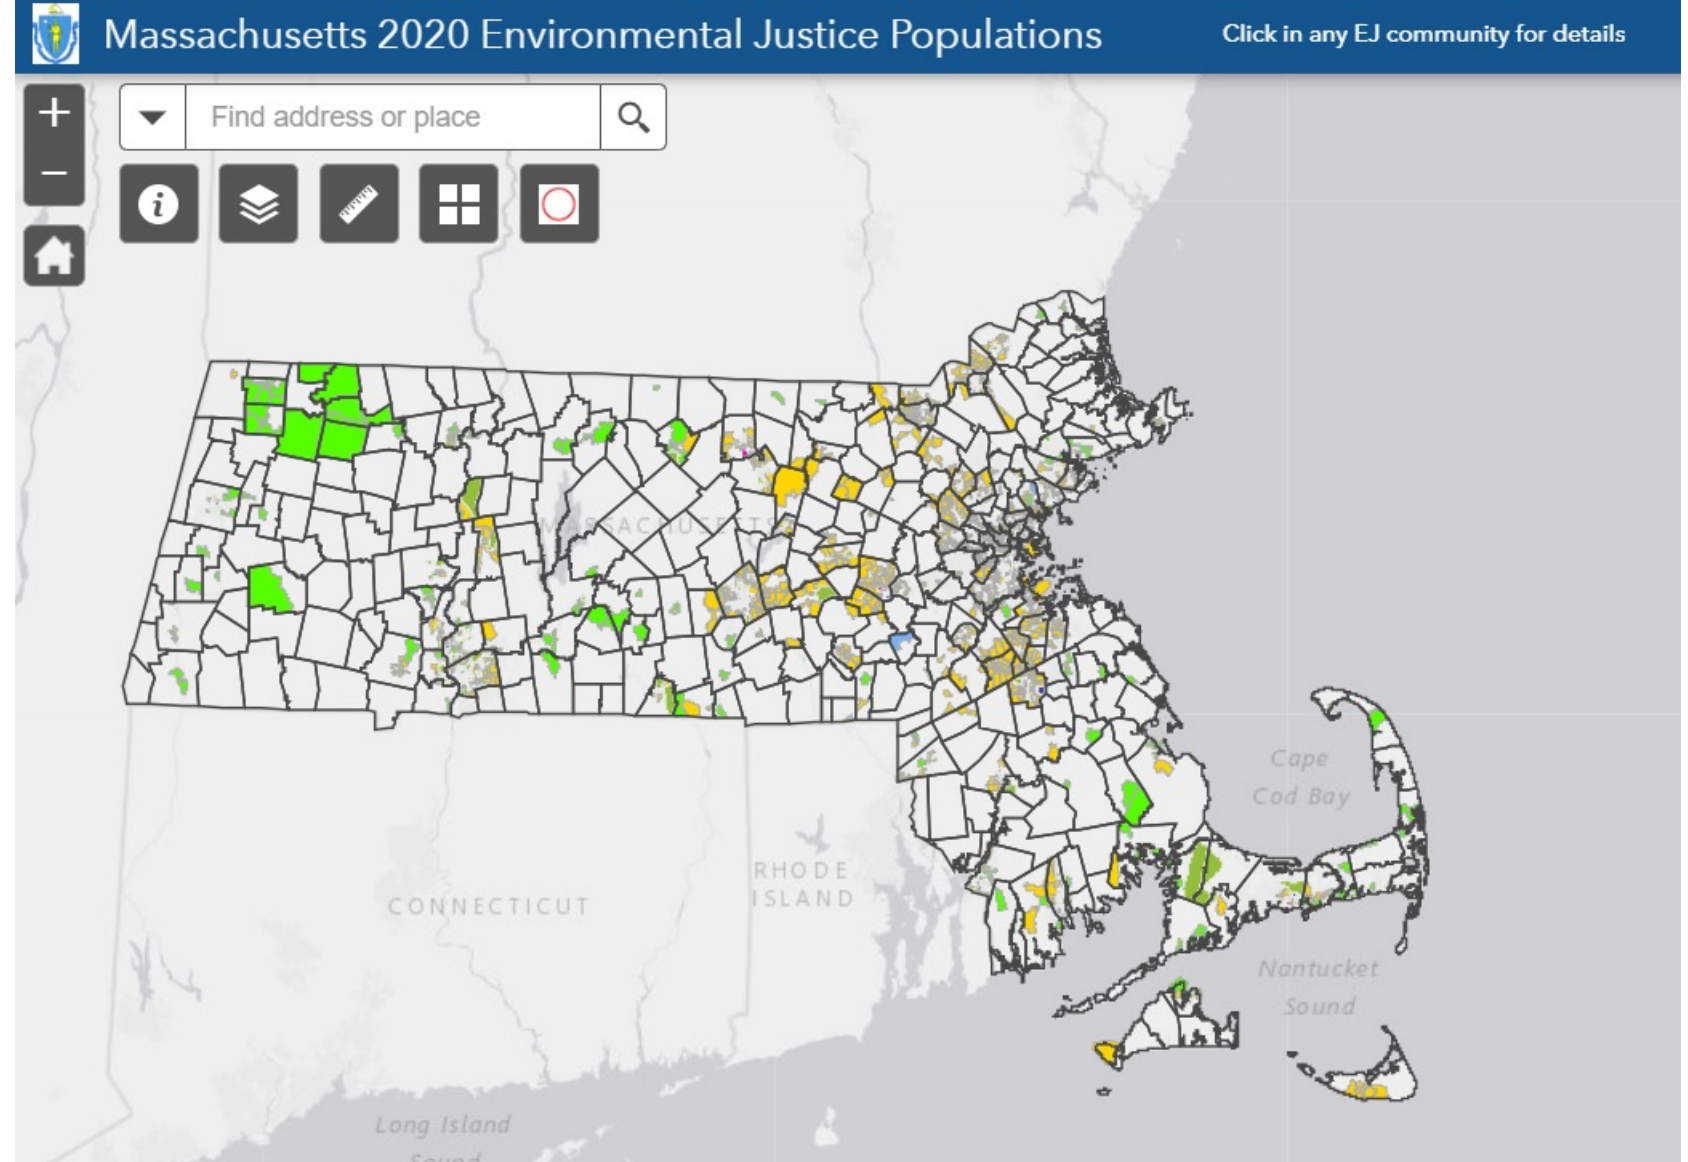

- Climate change, Energy, Health, Housing, Legacy pollution, Transportation, Water and wastewater, Workforce development

Data Sources:

- US Census Bureau
- Centers for Disease Control and Prevention
- FEMA National Risk Index
- First Street Foundation Climate Risk Data Access
- USACE Formerly Used Defense Sites
- US Department of Energy Low-Income Energy Affordability Data (LEAD)
- US Department of Interior (DOI) Abandoned Mine Land
- US DOT Traffic Data
- US Environmental Protection Agency
- US Geological Survey (USGS) MRLC NLCD Land Cover
- US HUD Housing Affordability Data
- National Community Reinvestment Coalition Data

Some states are beginning to develop their own methodologies and tools

Is there a best tool?

| | CDC SVI | DOE Energy Justice | USDOT ETC | EPA EJ Screen | FEMA NRI | CEJEST |
|--|---------|--------------------|-----------|---------------|----------|--------|
| Multiple data sources | | X | X | X | X | X |
| Index for comparison between geographies | X | X | X | | X | |
| “Labels” disadvantaged communities* | X | | X | | | X |
| Incorporates predictive data | | | | | | X |
| May be used in pursuing funding | X | X | X | X | X | X |

* Methodology and terminology vary

**More comprehensive matrix available in the appendix.

Is there a “best” tool?

It largely depends on the intent of use...

- **Are there specific projects or plans to be implemented?**
 - Transportation-related projects may benefit the most from **DOT’s ETC Explorer** and **FEMA NRI / RAPT**
 - Planning projects may benefit from significant time and investment in looking through report outs from **CEJST**, **EJScreen**, and **FEMA NRI** – particularly the environmental, economic, and institutional investment pieces
- **Do you know where your projects are currently located and need to identify the most vulnerable populations?**
 - **DOE Energy Justice Mapping Tool** considers the most household and transportation characteristics
 - **CEJST** considers historic underinvestment and environmental condition impacts
 - **FEMA NRI / RAPT** consider the most socioeconomic and economic resilience indicators
- **Would you like to best identify areas of potential flooding where projects could be implemented?**
 - **CEJST** incorporates third-party flood risk data and takes into account fluvial flooding
 - **FEMA NRI** best captures individual hazard expected annualized losses for buildings, people, and crops

Thank You!
